

## Now Available! QuickFire® SureShot RETROFIT KITS

We are excited to offer QuickFire® SureShot Retrofit Kits that enable current QuickFire® users to upgrade their systems with a series of enhancements.

The QuickFire® SureShot Retrofit Kits have been designed to improve your Quickfire's cleaning performance and provide greater ease of operation and reliability:

### New Enhanced Roller Assembly Replaces Caterpillar Bearings:

Eight high-grade rollercoaster wheels with stainless-steel bearing inserts now travel unimpeded over the rail helping to eliminate slippage during the wash process and the potential drag that can compromise the cleaning ability. This updated design distributes the pressure points and weight of the QuickFire SureShot roller system more evenly, creating the ability to contact the entire front, side and rear of the vehicle more consistently, resulting in a more complete clean. **Kit 112672**

### New Improved Cylinder Mounting & Sizer Design for Enhanced Durability & Smoother Action:

The mounts that hold the system's air over oil canisters and rod ends have been made more robust, eliminating potential failures of the pneumatic system. And the Dynatrigger® performance has been improved so there is less sensitivity in the settings, making it easier for the operator to dial in and maintain the system's performance parameters for optimal cleaning. **Kit 112675**

Contact your local Belanger distributor or the Belanger Parts Department for pricing and availability.
