

MAXAIR™

Producing Drier Vehicles and Greater Profits!

PDQ's MaxAir drying system is the industry's most complete collection of in-bay drying solutions available. With more options and layout configurations, operators can now choose the dryer types that best complement their wash bay, their budget, and their business model — for maximum return on their investment!

MaxAir dryers not only produce exceptionally dry vehicles, but they also help reduce your energy expenses & speed up your vehicle processing time — all of which INCREASE YOUR REVENUE!

With its innovative design, MaxAir dryers deliver high-velocity air to the vehicle surface – where it's most important. MaxAir producers are strategically positioned to move water quickly off the vehicle surface using the shortest distance possible for faster processing time, all while using less energy.

For installation and operational flexibility, the MaxAir dryers are available in both onboard as well as standalone designs. MaxAir onboard dryers can perform a FlashDry® by performing a rinse and dry in a single pass. The optional SwingAir Quad oscillating motion works to strategically sweep water off the vehicle resulting in faster drying times and more satisfied customers.

Still want to deliver additional drying enhancement, include the two optional outside producers or SideKicks to focus on pushing water down and off the sides of the vehicle.

With so many MaxAir dryer options to choose from, it is easy to produce exceptionally dry vehicles while increasing volume, customer loyalty, and ROI!

Design Configurations:

- MaxAir 4 Producer (Onboard, Free Standing, or Wall Mounted) – with or without SwingAir.
- MaxAir 6 Producer (Free Standing or Wall Mounted) - with or without SwingAir on top 4 producers.
- MaxAir with SideKicks (Free Standing or Wall Mounted) – with or without SwingAir on top 4 producers.

MaxAir with SideKicks

MaxAir 4 Producer

SwingAir 6 Producer

MaxAir 6 Producer

Features & Benefits:

- Touch-free design helps protect vehicle surfaces and puts customers at ease.
- High-velocity 7.5HP dryers use less energy than conventional dryers with the same number of producers.
- MaxAir with SideKick Nozzles boost drying effectiveness along sides of vehicles for increased customer satisfaction.
- Enhanced SwingAir oscillating motion feature helps sweep water from the vehicle's top surface more quickly, further improving dryer performance while still using less energy than most conventional dryers.
- Onboard designs require no additional bay space for installation and enable more flexibility for operators.
- Onboard designs are FlashDry® ready which speeds up the drying process for faster vehicle processing.
- Standalone MaxAir Dryer with Advanced Cover Package further enhances your wash bay and are even available with custom logo options to promote your brand.
- Both free-standing and wall mounted options feature stainless steel frames which provide natural corrosion resistance while delivering unprecedented lifecycle longevity.
